CERTIFICATE

(Certificate of conformity with technical requirements in:)

API STANDARD 607 EIGHTH EDITION, OCTOBER 2022

Certificate No.: 315827

Ref. Test report No.: 315828

Name and postal address of manufacturer: Antiwear (Suzhou) Industrial Intelligent Technology Co., Ltd.
No.988, Yuexiu Road, Fenhu Economic Development Zone, PC: 215200, Suzhou City, Jiangsu Province, P. R. China

We hereby certify that the fire test on below valves have been conducted at the laboratory designated by manufacturer and witnessed by TÜV SÜD inspector according to requirements of API STANDARD 607 EIGHTH EDITION, OCTOBER 2022. The testing results of valves meet the requirements of API STANDARD 607 EIGHTH EDITION, OCTOBER 2022.

1. Description of Test Valve:

Type of Test Valve	MSB-T2-900-2-RF-NN Ball Valve
Description of Test Valve	Ball Valve
Valve Size (NPS)	2"
Pressure Rating (Class)	Class 900
Valve Body Material	ASTM A351 CF8

2. Qualified Range of Valves :

Type	Ball Valves
Description of Valves	Ball Valves
Qualified Sizes (NPS) *(according to API 607 Table 3)*	2" and below,2 1/2",3",4"
Qualified Pressure Ratings(Class) *(according to API 607 Table 4)*	Class 900, Class 1500
Qualified Valve Material	According to API 607 7.2
Remark: the technical data of tested valves see back of this certificate appendix 1.	

This certificate is issued according to API STANDARD 607 EIGHTH EDITION, OCTOBER 2022, based upon the result of testing report on above mentioned test valve. The additional valve qualification shall be limited on similar valves of same basic design and construction as the test valves and of the same nonmetallic materials as the test valve in the seat-to-closure member seal, seat-to-body seal, stem seal, and body joint seal according to API STANDARD 607 EIGHTH EDITION, OCTOBER 2022, Paragraph 7.

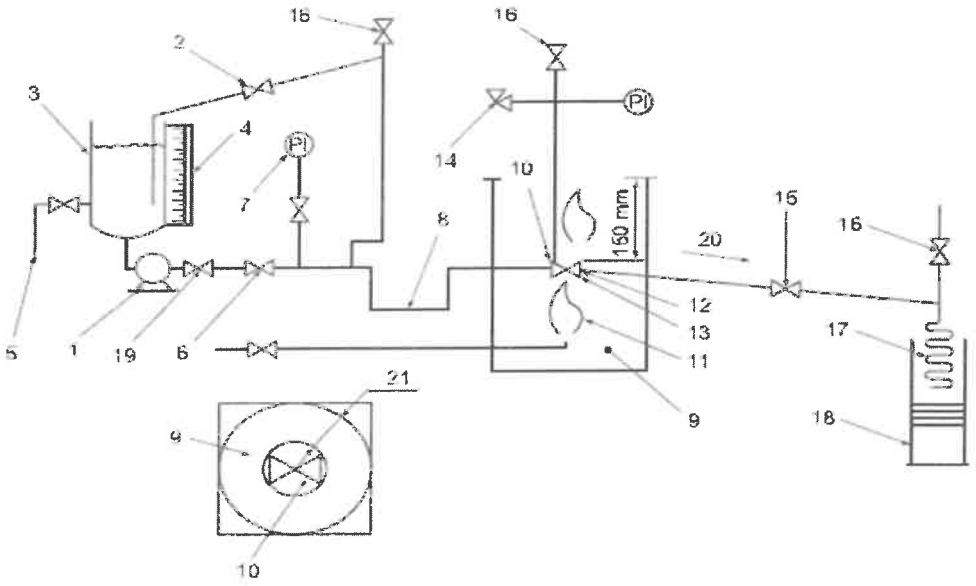
Inspection and Tests

1. Conformity of Equipment

The test equipment was verified by TÜV SÜD inspector according to requirements of API STANDARD 607 EIGHTH EDITION, OCTOBER 2022. Para.5.3 and found satisfactory. The detail arrangement of the fire-test equipment is shown below:

Figure 1. Typical Fire-Test System Using a Pump as the Pressure Source



a) Pump as pressure source

Key

1. Pressure source	10. Test valve mounted horizontally	19. Check valve
2. Pressure regulatorand relief	with stem in horizontal position	20. Slope
3. Vessel for water	11. Fuel gas supply and burner	21. Clearance: 150 mm
4. Calibrated sight gauge	12. Calorimeter cubes	
5. Water supply	13. Flame environment and body thermocouples	
6. Shut-off valve	14. Pressure gauge and relief valve	
7. Pressure gauge	15. Shut-off valve	
8. Piping arranged to	16. Vent valve	
provide vapor trap	17. Condenser	
9. Enclosure for test	18. Container

Tel.: +86(0) 21 6141 0123
Fax: +86(0) 21 6140 8600
Internet: www.tuvsud.cn

2. Calibration of measurement and test instrument

   The measurement and test instrument have been properly calibrated such as pressure gauges, thermocouples, etc.

3. Technical Data of Test Valve:

   a) Description of test valve

Type of Test Valves	MSB-T2-900-2-RF-NN Ball Valve
Description of Valves	Ball Valve
Pressure Class	Class 900
Valve Size	2"
Flange Connection	ASME B16.5
Designed Standard	ASME B16.34

   b) Details of technical data on test valve

Part Name	Materials
Body	ASTM A351 CF8
Bonnet	ASTM A351 CF8
Bottom Cover	ASTM A182 F316L
Stem	630+G14
Lower Stem	630+G14
Ball	ASTM A182 F51+G06
Gasket	316L+ Flexible Graphite
Seal Ring	Flexible Graphite
Packing	Flexible Graphite
Seat	ASTM A182 F51+G05+G50
O-Ring	V0390N
Yoke	ASTM A351 CF8
Nut	ASTM A194 8
Bolt	ASTM A193 B8 CL2
Packing Box	ASTM A182 F316L
Design Assembly Drawing No.:	MSBBJ-2F9RF-C-ZJ-X6-D-155 Rev.A1

TÜV SÜD Certification and Testing (China) Co., Ltd. Shanghai Branch
Floor 3-13, No.151, Heng Tong Road, Shanghai, P. R. China
Tel.: +86(0) 21 6141 0123
Fax: +86(0) 21 6140 8600
Internet: www.tuvsud.cn

4. Visual and dimensional Check on Valve Specimen:

The specimen valve was chosen at random by the manufacturer in its workshop and submitted to the laboratory. The visual and dimensional check was performed according to drawing No. WTJ0855F2S3DAIR1SXWDQ and results found satisfactory. The mark was verified on valve as following:

Manufacturer` Brand	2"	900	CF8
	Size	Class	Material

5. Document Review:

The chemical and mechanical test report of castings was reviewed and found satisfactory. Also the inspection report of shell test, hydro seat test and air seat test were reviewed and found satisfactory.

6. Preparation before testing:

6.1 The thermocouples and calorimeters were installed properly according to Figure 1,2,3,4 in API 607. Two thermocouples (part 13) are installed to measure flame temperature, one is located under valve body, another is located under valve stem, both within 25mm. Two calorimeters (part 12) are positioned to the same place as the thermocouples do.

6.2 The test system including test valve (part 10) was cleaned through by water before testing. All air was purged from test valve and testing system by water.

6.3 The test system was pressurized to 20.8 MPa after the test valve and system upstream of valve have been completely full of water and system downstream of the test valve have been completely empty of water. The system and test valve were carefully checked for leakage when the test pressure was held at 20.8 MPa. No leakage was found on system and test valve.

7. Fire Test:

The fire test was conducted according to API STANDARD 607 EIGHTH EDITION, OCTOBER 2022 Section 5. The pressure of the system upstream was kept 11.2 MPa, then the fire ignited. The flame temperature reached 750°C within 2 minutes after ignition. The test pressure and temperature were maintained at 11.2 MPa during the fire test. The temperature and pressure were recorded continuously by the operators. The system and test valve was cooled below 100 °C within 5 minutes by shower nozzles after 30 minutes fire test. The loss of water weight in vessel was measured by weighing scale and water in calibrated container (part 18) were read and recorded. The test result is shown as below:

TÜV SÜD Certification and Testing (China) Co., Ltd. Shanghai Branch
Floor 3-13, No.151, Heng Tong Road, Shanghai, P. R. China
Tel.: +86(0) 21 6141 0123
Fax: +86(0) 21 6140 8600
Internet: www.tuvsud.cn

Test result of fire test

Item	API 607 Required Value	Actual Value
Test Pressure (MPa)	11.2 MPa	10.83-11.98 MPa
Test Temperature	750 - 1000 ℃	816.8 – 871.0℃
Through-valve leakage according to API 607 table 1	≤ 800 ml / minute	49.0 ml / minute
Total weight of water through valve seat during cooling down period	0 ml	
Total time from fire test to cooling down	35 Minutes	
External Leakage	≤ 200 ml / minute	10.5 ml / minute
Conclusion: the test result is satisfactory according to API 607.		

8. Operational Test:

The test valve was cooled below 100 ℃ within 5 minutes after complete the fire test. The operational test was conducted according to API STANDARD 607 EIGHTH EDITION, OCTOBER 2022 Para. 6.6 and 5.6.17. The upstream pressure was increased to 11.2 MPa then the test valve was fully opened against the high test pressure differential to vent the piping and test valve body cavity to remove air or steam. The downstream shutoff valve was then closed and the system pressure was increased to and maintained at 11.2 MPa. Then measured and recorded external leakage for a period of five minutes after valve was in the open position at high test pressure. The test result was recorded as below:

Test result of operational test

Item	API 607 Required Value	Actual Value
Test Pressure (MPa)	11.2 MPa	11.2 MPa
Test Temperature	30 ℃	
Test Time	5 minutes	
External Leakage	≤ 50 ml / minute	35.6 ml / minute
Conclusion: the test result is satisfactory according to API 607.		

The undersigned, hereby declare that I have checked test valve and witnessed the fire test on the test valve according to API STANDARD 607 EIGHTH EDITION, OCTOBER 2022. The test result is satisfactory.
